BXP
SETUP | STARTUP | SCALEUP

- Featured Project: AI Adoption in Indian Businesses
- Focus: Looking what's trending in AI field
- Tools & Tech: Google Sheets & Canva Newsletter Template

Lets see the graph -

Early 2025 (Jan-Mar): Low interest (mostly single digits, 0-11)

Mid 2025 (Apr-Jul): Moderate interest (6-34, with a spike to 49 in June)

Late 2025 (Aug-Dec): Massive growth (peaking at 100 in November)

Possible Reasons for Spikes

1. June Spike (Index: 49)

Possible Drivers:

- **Quarterly Planning:** Intense end-of-Q1 financial year planning and strategy shifts.
- **Budget Approvals:** Mid-year release of funds for new technology and infrastructure upgrades.
- **Industry Events:** Impact of major tech conferences in India traditionally held mid-year, driving interest in innovation.

2. October–November Surge (Index: 40 → 100)

Possible Drivers:

- **The Diwali Effect:** A massive seasonal peak where businesses invest in productivity tools and new inventory before the festive break and the Hindu New Year.
- **Budget Utilization:** Companies aggressively spending remaining Q3/Q4 budgets to avoid forfeiture in the next fiscal cycle.
- **AI Product Launches:** Potential market entry of major AI solutions by Indian firms, causing a significant spike in tech-related interest.
- **Forward Planning:** Strategic gearing up for the 2026 calendar year, focusing on automation and efficiency.

3. Low Periods (March)

Possible Drivers:

- **Financial Year-End Closing:** In India, March is dedicated to grueling tax compliance, audits, and closing of books, leaving little room for new business initiatives or external research.
- **Resource Diversion:** Priorities shift entirely toward balancing balance sheets rather than exploring new tools or services.

Q4 is when they actually buy. Plain and simple. October to December, companies stop browsing and start spending. Budgets are open, decisions get made. If you're not in their inbox these months, you're invisible when it counts.

Start in September. Here's why—by November they've already picked favorites. September and October are when they research, compare, and shortlist. Show up early, stay top of mind.

June is your test crowd. That 49 spike? Early adopters. Tech folks who try everything. Use them to test, break things, fix them. By November, your product's ready for the serious buyers.

Recommended Email Campaign Strategy

September – Teach. No selling. Just helpful stuff—how AI saves time, real examples, mistakes to avoid. Make them trust you.

October – Prove it. Case studies. ROI numbers. Success stories from similar businesses. Make the decision feel safe.

November – Close them. Peak demand. Limited offers. Free demos. Make it easy to say yes.

December – Keep them. They bought. Now show them how to win. Share tips, success stories, answer questions. This is how you keep them paying in 2026.
